

ABSTRACT

PT. VILOUR Promo Indonesia is a company with national scale which runs their business by selling sport accessories, Bandung Oblong shirts, material and souvenir of promo. VILOUR also sponsor various Indonesia football club like PSMS, PSM, AREMA, and PERSIK. Basically area works PT VILOUR consist of three big shares that are production, marketing, and retail. Retail Vilour is shop selling various sports accessories, start from football shirts until smallest miniatures. Vilour shop located in Jl. Dipatiukur no 76 A Bandung. So that, in running their business, Vilour Shop need an application facilitating officer in serving online transaction, and facilitate buyer candidate to access information by online. See that requirement, in this final project is made an application that named “Web based of retail data management in Vilour Dipattiukur Accessories sport shop”.

The functions of this application are making easier for officer to manage the product data and retail data include order, selling, payment data. This application also gives a new alternative for customer to order product by online. This condision can make the distribution data more wide and increase the number of selling.

The making of this final project use software engineering method of waterfall, and implementation by using PHP programming language, while the processing of its database use MySQL.
