

ABSTRACT

The internet user in Indonesia is increasing days to days, from 8% in 2005 to 25% in 2009. This growth changes the way the society look for internet from just to searching informations, then now to do the commerce transaction.

Looking at the market share in the bidding that can be done on the internet, Maroon Computer Solution (MCS) store which moves in computer product sales to surrounding communities, will take part in the service of selling computers through online media.

The resulting system will be used by MCS store as a facility to makes their costumers easily get the informations about the computer equipments to be purchased and can handle the ordering via web.

This system is built using web PHP programming language and MySQL as the database.

Key words :Sales,website, computer store
