

ABSTRACT

In this current time, data organizing on a district (kecamatan) are still done manually, where each citizenship data and local area infrastructure are recorded in each villages on an uncomputerized system and are still using sheets of paper which are next to be taken to the district and re-recorded by the district's employees. Oftentimes, this burden the district's employees in data reporting process dan resulting in a waste of working time because of the re-recording.

So, an application will be made in this final project that are able to record and process citizenship data and local area infrastructure at Dayeuh Kolot district. Hopefully this application will help and ease the employees on villages and district of Dayeuh Kolot to record and process data also ease the data reporting process.

This application will be built using PHP as web application scripting and MySQL as its database. Also, Adobe Dreamweaver CS3 will be used as editor to build the application.

Key Word: Dayeuh Kolot, demography, area infrastructure.
