Abstract

At the end of the project has created an application capable of recording and managing all data transactions in plastic and cake materials store in particular Mawaddah Plastics Store.

Plastics and Cakes Materials Stores including the many shops in the market because it is increasingly more demand for plastics and the need for cake ingredients. But still many of these stores still keep records of all transactions manually or not computerized so often creates difficulties in data management. With these applications are expected to assist and facilitate Mawaddah Plastics Store in recording activities and transactions and data management in managing all the data.

This final project is implemented by using Visual Basic programming language and MySQL database.
