

ABSTRACT

In Primagama institution National Examination Try Out for Junior High School is a very important agenda. However, the existing system still has some problems, including the student is not a report of its own value (book student report cards), report only the value of Try Out a list of the values of all students. In addition, the period for reporting results Try Out a minimum value within two days could not be any faster.

Application of National Examination Try Out Web-Based for Junior High School made to overcome some of these problems. Applications that run on (LAN) will be the application of alternative solutions in educational institutions Primagama - Cipagalo, which is expected to maximize the performance of educational institutions Primagama to become a leading educational institution in the achievement.

Final project will be made using waterfall method and the implentasikan with the PHP programming language using the MySQL database and other supporting software.

Key words : *Try Out, Ujian Nasional, Primagama, Waterfall, PHP, Database Mysql.*
