

ABSTRACT

As one of the hospitals that operated in support of the surrounding public health, Achmad Mochtar Hospital has shown his part by providing a variety of doctors in all areas, pharmacies and other facilities to help the community. However, this hospital think that still has some shortcomings in order to deliver excellent service for hospital visitors (patients).

Perceived shortcomings is the lack of information bill payments that charged to the patient. So that the patient or patient's family can not know the number of bills to be paid when the patient completed treatment in hospital. In addition, shortages are also felt that the lack of clear information about the cost of any act done nursing, so when the payment of all costs of nursing actions that served the patient must manually counted. Also there are still some errors in the recording of medical records (medical record). This is because the medical records are still handled manually.

Therefore, the project titled Medical Payment Fee Application on Case Study: Hospital VIP section. Achmad Mochtar Bukittinggi is designed to overcome the obstacles mentioned above. Data management systems and medical payment data collection will be made into a computerized system, so as to provide patient care cost information. Also assist in patient care costs recap by making it more computerized.

This Final Project using waterfall method and the implentasikan with the PHP programming language using the MySQL database and other supporting software
