

ABSTRACT

Indohome is a company which run its business in installment of electronic and furniture. Until now, their branch office that located in Bandung still make and store their transactions manually so they often find problems when do administrations, make report, as well as to find out customer that have or haven't paid their installment for current month. Therefore, this final project with its title : *Application of Sales Transaction of Electronic and Furniture Installment Case Study : Indohome Bandung* is made for solve the problems. This final project used Waterfall method. This Information System will be implemented with Visual Basic .NET as programming language and SQL Server Application Database as the database. The result is an application desktop-based that can be use to record transaction, customer installment checking, and reporting. Record transaction will store transaction data into the database. Customer installment checking is used to know whether customer have paid their installment for current month. Reporting is used to display and print final result of period report.
