

Abstract

Web programming is a subject which studied about web programming language using the PHP language. However, because the development of programming languages then released a new version of PHP 5.0 pemrograman language or web programming language with object-oriented, so in this case the student is difficult to do an adaptation of a structured programming to object-oriented programming, web programming course this is done twice week with the length of the meeting every time there is a two-hour sessions so that the flavor is not enough to satisfy their knowledge of the PHP language. E-Learning is a content and instructional methods by using electronic applications with media Internet or intranet to build knowledge and expertise with the aim of learning a particular individual or organization.

Implementation of e-Learning will be there are 3 users are admins, tutor, member of student D3 IT Telkom. The presentation will be web-based materials that use dynamic web in the form of representation with a blend of text that support the absorption of memory in understanding the material and facilitate capture the concept of matter, and also accompanied with the question latihah students who will develop the concept itself, so it will form a student who understands will be object-oriented web programming, so that students can understand the usefulness and advanced web programming language is object-oriented.

Therefore, with the application of e-learning web-based PWBO on intranet on IT Telkom is expected to be a solution to overcome the learning barriers that exist.

Key words : e-Learning, PHP, IT Telkom
