

ABSTRACT

Along with the technological developments of ICT (Information and Communication Technology) today, the society claimed to be more active in knowing the technology is being developed at this time. Information should be a very important thing, is not surprised by the development of the telecommunications world. Namely the role of SMS (Short Message Service) in everyday life is a habit that is very closely keterbiasaan hubangannya with our lives.

On the other hand can not be separated from the world of cyber (internet) which yore who used th manual system, so it will be soon a bandoned and replaced with computer-based system or the internet online. This is due, the manual system has many disadvantages compared to the internet online computer-based system, both in terms of efficiency and effectiveness.

In a day-to-day activities, we know that now is the process of admission of new students are always routinely carried high. Various constraints also appear in each process of the implementation of these activities both from party committees and candidates for student applicants. Information systems are desirable from the school or the committee organizers were able to provide maximum information in an accurate, fast and flexibelitas in terms of efficiency and effectiveness of time.

In this final project will benefit from the SMS Gateway is implemented as a tool to convey information about the selection process of new students at a state high school sekabupaten Jombang. With expectations so that students can cosmpete in meemperoleh school they want and they expect. While for this website used to know the processes of anything dipendaftar so that the results of an information can be known by the prospective applicant is good anywhere and anytime.

With the SMS Gateway and the website is expected to be created a new hope, what is the bottleneck problems of new students before-before we can finish well and easily so that it can produce a maximum result and benefit for both parties.
