

Abstract

Nowdays, the growth of technology can help in managing data to minimize mistakes. PT. Surya Kebaktek is a factory located in Karanganyar district, which has a cooperation factory employees engaged in saving and loan. Until few months ago the cooperation did some managerial thing manually, this kind of management system starting a perceived lack of effective and efficient for the present.

Therefore designed a application to manage data and transactions in order to facilitate cooperation in the management of employee business processes that occur in the process of computerization. Then based on survey and questioner, can be shown that transactions with the member more quickly, efficiently, and reduce the level of errors made by human.

Keywords: transaction, saving, loan, error.
