Abstract

MDM is one of many boutiques in Lampung, particularly in Metro city. MDM distributes many products, especially for girls and women. MDM Boutique sells not only clothes, but also various kinds of bags, shoes, and accessory. MDM Boutique is only located in Metro because MDM Boutique has not had any branch, either in Metro or in other cities. The commercial process of MDM Boutique, between the owner and consumer, takes place in MDM Boutique itself. The consumer can only come directly to MDM Boutique. Therefore, in order to ease the transaction, MDM Boutique need a system that enables the transaction done without compelling the consumer to go to MDM Botique.

This Final Project is implemented on a web based software which is connected to internet network, so that this web can be accessed everytime by everyone and in everywhere. Those who are able to order the products in MDM Boutique are the users who have done the registration and for the payment process is done by transferring the money to the bill of MDM Boutique. This application is built with PHP and Javascript program language, HTML for making design, and MySQL as database.

MDM Butique application provides product categorizing to facilitate consumer in searching for the product that they want based on their own personality.

Keywords : MDM, Boutique, Web.
