

ABSTRACT

PO. Black Pearl is a company engaged in the rental of a bus transport service based in the city of Makassar. Generally to do a transaction in this case a ticket reservation, the prospective customer has to come to the location of ticket purchase. Through this traditional system, the buyer would find it difficult if the place ticket reservations are located far from the location of the customer. With the new system via the web, the company will provide convenience to the customer to place an order directly without having to visit the ticket sales locations.

Final project, entitled "Web Online Bus Ticket Reservation PO. Black Pearl "was designed to provide convenience in ordering, printing and cancellation of tickets, ticket manage data, and distribute information on tickets, schedules and other info-info. This application is designed with a structure such as client-server system to reserve a ticket, hoping to be able to use and allows customers to make ticket reservations and assist companies in managing the administration of transactions that will be built using the PHP programming language and MySQL as the database. The final project is used by customers to make reservations online bus tickets and used by companies to monitor and manage the transaction ticket reservations made by customers.
