

ABSTRACT

Electronics laboratory is a laboratory devoted to helping students understanding of electronics subject. The colleges who want to join the practicum should pass register stage. After doing practicum, there will be appraisal system which include pre-assignment, pre-test,practicum and journal.

The problem that occur in practicum management is the laboratory don't have application that can manage the activity of practicum. The activity of practicum management still manually so it need more time and unstructured

Therefore, electronics laboratory needs an application based on computeritation that can process of electronics practicum management. The application must have permission access for ensure the secure problem. Beside that, the application has to be can process the data of laboratory and be the source of information for the laboratory.
