

ABSTRACT

Az zahra's Daycare is one of a daycare in bandung. Az Zahra has motto, namely, "Developing good character and the multiple intelegences of children". In Azzahra is still using a manual operation for saving data like presence, the growth of the children, and the activity of the children.

With the existing system that already using in the daycare, it probably to do a development storing the data into a database, So that the management of the data is more organized. In this final project, the outgrowth of children's monitoring application in az zahra's daycare that can be preview in handphone and computer. So that, the parent can monitor his/her children.

The Outgrowth of The Children's Monitoring Application in The Day Care is used by the parent and nanny to supervise the outgrowth of the children in the daycare. This application is used fr managed the data in this daycare. So, the data can be managed properly. This application built using PHP, CSS, MySQL, jQuery and javascript.
