

ABSTRACT

CV. Global Technologies is one of the businesses engaged in information technology which is located in the city of Sidoarjo, East Java. Data management product sales on the CV. Global Technology still uses a manual that is recorded in book sales. This led to the disintegration of the data that is often less effective and efficient, especially in terms of time and effort.

Therefore, the CV. Global Technology requires an application that can help in the process of data management product sales. Web-based application was chosen because it has its advantages can be publicly accessible so as to expand the reach of the sale. While the sales transaction is handled in this application form sale of products that are ready stock and products which are pre order. Product Sales application was made in hopes of helping the parties resume the duty to manage the Data Product Sales.

Product Sales application is built by implementing the concept of MVC so hopefully easily in further development. This application was built using the programming language PHP with CodeIgniter framework and MySQL database as a data base.

Key words: *Product Sales, Management, MVC, CodeIgniter, MySql*
