

ABSTRACT

In order to enhance the quality of the management of payroll, now the Supervisor Institution Office of Tana Toraja Regency already using Ms. Excel to collect data in payroll due to no longer use a manual as noted in the payroll. However the management data using MS Excel is not maximized because of the payroll calculation errors still occur.

Supervisor Institution Office requires an application that can help manage the payroll for their employees. Intended application is an application that can store data in large numbers payroll and payroll process in an effective and efficient.

Employee Payroll application is made to provide detailed and clear information on the Supervisor Institution Office of Tana Toraja Regency. This application is designed with a structured analysis method, implemented by using a web-based programming language PHP, and php My Admin as its database.

Final project entitled "Employee Payroll Applications for Supervisor Institution Office of Tana Toraja Regency " thus has the ability to store and manage employee payroll data at the Supervisor Institution Office of Tana Toraja Regency.
