

ABSTRACT

Device and user layout in Telkom Lembong changed dynamically whether in device addition or reduction. A synchronized map layout with the real layout will be very helpful for user to inventoried device list of Telkom Lembong. The Telkom Lembong's Information System Division nowadays had some difficulties to indentified devices inventory because of out of dated layouts.

This application offered some solutions to inventory problem above. By using this application hopefully Information System Division will able to solve the device mapping difficulty.

The Office Layout is a setting of office furniture such as computer, printer, scanner, etc; in a certain room in Telkom Lembong. Information System Division of Telkom Lembong did these office layout settings to make easier to inventoried all devices used by all workers in Telkom Lembong.

The Waterfall and Prototyping method used in this final project development which is implemented with PHP Framework, MySQL database, Adobe Flash 8, and other softwares.

Keyword : Office Layout, PHP Framework, Flash 8, Action Script.
