

## **Abstract**

PT TELKOM Indonesia has several divisions including the Unit Enterprise Division. This division is responsible for infocom service delivery channel to Corporate Customer across Indonesia. Unit Enterprise Division 7<sup>th</sup> Regional in 1<sup>st</sup> Area of Bali have 36 employees with 15 units of car service. In carrying out its Enterprise Unit of the Division is given the facility of a Vehicle for employees' duty.

Vehicles are managed by several employees that have been designated as the administrator of motor vehicle (KBM). Administrators in charge of all administration and checking of vehicle loans. KBM system is currently running still manual any lending activity is recorded manually on paper by the board KBM. With a manual system that is still is a lot happening in the borrowing and repayment problems because of the lending activities of employees and limited power to regulate the management of borrowing and repayment, the emerging problems such as irregular returns, recap the data are incomplete borrowing, and the absence of Data cars that are being borrowed by employees, so that other employees do not know when it can borrow the car.

This application is aim to facilitate the management to the management of borrowing and repayment, assist managers in dealing recap lending activities, and facilitate employees in the lending and borrowing to provide information about vehicle that has been done.
