

## **ABSTRACT**

Money and everyday life are two things that difficult to be separated in this modern days like today. Those things could had some problem like the wallet that almost used up entirely but still half a month left until the month end, or didn't know where the money spent. Even these problem looks trivial, but if it left unhandled, it could become a habit and trigger bigger problems.

Financial planning is the one that can help people solve their financial problem that mentioned before. The traditional financial planning will still difficult to handle modern people that get busier with their activities like today. Of course with the advanced technology that our civilization had today, it should be used to make these things easier. People should be doing financial planning easier dan more flexible. Because of that, there must be a system that utilize the modern technology for financial planning to become easier and more flexible.

The purpose of this final project is to created system like that. With the function like homescreen widget, autocomplete, and dashboard that helped to overview the user's plan, and other great functions, this system hoped could help people to do financial planning easier, faster, and more flexible
