

Abstract

Labor migrants is a profession which is owned by a resident of Indonesia in the field of energy to be sent to foreign countries that already have agreements with Indonesia, where the distribution made by the National Board under the Government directly or through Private Agency. One of the cooperation that Indonesia made is the State Labor with Korea, it is a program of Government to Government (G to G) that is done directly by the National Agency for the BNP2TKI (National Agency for Employment Protection and Indonesia).

So far, the implementation of the program G to G inputting data of the test is still done manually with an Excel file containing the data of test results to BNP2TKI. In addition, there are also applications that do not contain data on all the test results or the selection of Labour candidates Indonesia is housed in one database, so that the stored data validity is still questionable. Making this application aims is to increase the validity data in a series of candidate selection process of Manpower Indonesia, so that Indonesia can send more qualified workforce, especially to Korea.

Key words: TKI, BNP2TKI, Government to Government (G to G), Korea.
