

## ABSTRACT

Nowdays people is easy to go to other cities, with a lot of available transportation facilities. The transportate that available is such as air transport, land and sea. But a lot of transportation is not easy to get by traveller. Like train transportation and airplane, not any city have train station or airport. But every cities must be have transportation facilities that can use to go to other cities.

To resolve the problem of traveller to go to other cities, then it's needed a application that can give information about public vehicle to go to other cities. By the information that android is reach out 3.7 million in last December 2011,[2] and android is a operating system contained in smartphone. And according to this analysis, Android Application is the most possible one to be developed.

“Travel Guide Application Development With Public Vehicle Bali Java Travel Using *Android* Platform” Application is a application in mobile platform Android that can help them to search information public vehicle to go to other cities. This Application can give information about alternative route can be used to reach the destination city.

**Key Word:** *Public Vehicle, Route, City, Information*
