

Abstract

Since the change in the evaluation by the Mid Term (UTS) and Final Exam (UAS) into the assessment method in Telkom Polytechnic on the new semester, period 2011/2012, resulting in all subjects be required to apply the evaluation method. In applying the method of assessment over it, be found some deficiencies. These deficiencies can be seen from the side of subjects coordinator, lecturer on the parallel class, and from the students.

Final project entitled "Application and Management of Assessment at the Polytechnic Telkom for Migration Data Subject, Algorithm Programming and Management Information Systems" is built using PHP programming language and use CodeIgniter framework. With the features of the management and processing of all documents related to the assessment process on this application, expected to resolve the assessment system deficiencies that exist today and this application is to be a good solution for the current assessment process, particularly writing assessment.

Key words: assessment, coordinators, lecturer, students, Telkom Polytechnic.
