

ABSTRACT

Telkom SMBB an entry point for prospective students to be able to continue their education at universities under the auspices of Yayasan Pendidikan Telkom. In particular who want to undergo lectures on IT Telkom. In order to continue his education in IT Telkom both necessary and sufficient competence of prospective students. To be able to get a good competence at the time of IT Telkom taking an entrance exam, exam simulation exercise is required in order to prepare yourself before the real exam. One test is a simulation exercise by following the online tryout. This application provides simulation exercises to test displaying the form of questions at random based on their subject. In addition, this application also handles the key answers and discussion of the matter itself. This application can also view graphs tryout participants at regular intervals. This application is expected to help potential participants to train kompetensi SMBB Telkom before the real exam The making of this application, is needs some programming languages like PHP and MySQL as database management. In the other hand, for editor writing program was used Adobe Dreamweaver CS5.

Keywords: *SMBB, tryout, PHP, MySQL*
