

## ABSTRACT

*Department of Energy and Mineral Resources of West Java is a department which handle the management of energy and mineral resources problems which is exist in West Java province. In this department, the management of all employee data base is being done manually. Human Resource (HR) section is the part which is taking care of employee data management problems. Basically, its Human Resource (HR) here two functional tasks, as a managerial functions and operational functions (technical). Managerial functions contain of organizing, planning, controlling and directing employee. While the operational functions contain of the development, maintenance, procurement, and retired employees. In managing employee's data, the human resource section still entrying all of employee's data manually, such as data manipulation, position, class, training and employee's data statistics, based on specific categories. In addition to list of employee attendance is still being done manually, so that performance of employee data management of became is effectiveless and unefficient. To overcome these problems, so, there is made an Employment Application Of Energy and Mineral Resource Department Of West Java. The making of this application, is needs some programming languages like PHP and MySQL as database management. In the other hand, for editor writing program was used Adobe Dreamweaver CS5.*
