

## **Abstract**

Zakat is one of the pillars that must be done for Muslims who have fulfilled the terms of the tithe, but in reality the application of zakat is often not as they should because of some problems such as busy, lack of knowledge about the zakat, or even perhaps because it is difficult to make a payment of zakat due lack of information about the amil zakat. Though zakat is one solution to reduce poverty in this country, and have been many studies that prove that if the charity can be done correctly then the problem can be overcome poverty and welfare.

Needed a way to facilitate a person to overcome these problems, therefore the authors develop applications based on mobile devices that can be used to help the user implement the obligations berzakatnya. The author sees the development of mobile lately very rapidly, especially the mobile device with android platform because of that, author choose application based on mobile . These, authors developed an application which has the main function of the calculation of zakat, zakat payment reminders, payment of zakat history storage, amil zakat navigation to find out who were around the user with a map, information about a specific charity and information about amil zakat taken from certain sources that user can read it easily.

**Keywords:** *zakat, mobile, android*
