

ABSTRACT

Bubble laundry is a company which is offer clothes laundry service . Up to this moment, Bubble Laundry still use manual data management for their business data, and it is not convenient and hard to maintain.

In this final project, I build an application which will help Bubble Laundry in managing their transaction data. There are some features in the application such as ; admin can manage data master that is consist of - customer data, employee data, shelf data, remark data, laundry's item data, attendance-, and logistic data which is consist of – taking and inputing logistic and transaction data which is consist of-delivering and taking laundry . Beside it, there is owner feature, where the owner only observe cutomers report, logistics data report , and also monthly transcation report.

This application is built by using JAVA programming language and MYSQL for the databasic.

Keyword : application, managing, Data, JAVA and MySQL
