

ABSTRACT

"Receptacle Clothing" is one of the clothing line in Bandung who provide services in a clothes-making. Receptacle Clothing choosing clothes segment because of clothes are primary requirement which is needed by the market continuously. In Receptacle itself does not have online store system and data processing are still manually

With the existing system that already using in the receptacle, it probably to do a development storing the data into a database, So that the management of the data is more organized. In this final project, an application for clothes design contest is made for not only providing benefits to Receptacle, but also to optimize the ability of designer in a competition called Design Contest.

This Design Contest application may be used by anyone who has the ability of design, and for sure, customers of the Receptacle Clothing itself. This application can also be used for data management in Receptacle Clothing. So, the data can be managed properly. This application built using PHP, CSS, MySQL, jQuery and javascript.
