

## ABSTRACT

Day Care is the child care facility that carried out during working hours. Day Care is an organized effort to take care of children outside of their homes for several hours in a day. Day care only as parenting care supplement and not as surrogate parenting.

Mata Hati Day Care is one of day care located in Bandung region. Before a child entrusted at the Mata Hati day care, parents will be a going through a registration process. The day care to do this to record the parents data and the child data that entrusted at day care. Children will be entrusted in day care during the child's parents working. The day care staff noted the presence of child that entrusted in day care.

Children who are in day are not only entrusted, but they are educated and outgrowth of children considered. they are taught through activities that organized by day care. Outgrowth of children in day care considered by the examination of psychologists, nurses, and a doctor. The day care staff noted the children activities data and the children outgrowth activities which will be reported to parents.

Day Care provides a person or persons that work to maintain and educate children. Headmaster of day care will arrange many schedule and set the number of children that must be maintained by many. Recording system at the care still done manually.

The final project purposed to create an application that can manage and record the registration data, the presence of children data, children activities data, and children outgrowth data. The application is also used to record the many schedule data, the presence of many data that be expected to record payroll data. Further, this application is also used to record the inventory data, consumption data and operational data that be expected to record finance data, This application is expected to automate the processing of recording data in Day Care Mata Hati. It will be required HTML and PHP programming language with additional from Macromedia Dreamweaver, Notepad++ and Microsoft Visio 2007 for system modeling. where as for the database using MySQL .

Key word : Day Care, HTML, PHP, and MySQL.
