ABSTRACT

Career Development Center IT Telkom offers information about softkill training that can be followed by students. To support this, CDC requires information systems that can help CDC to input training activities and help students to observe the training activities.

In this final project, the training information system in Career Development Center IT Telkom is supported by SMS gateway. There are several features in this information system, the admin can manage the training data, managing the articles, sending a sms reminder to the participants, and can create a certificate for students. While the features for students are students can see a list of training available, students can register as a trainee, and students can print a certificate of training that have been followed before.

This application using HTML and PHP programming language, Gammu as a supporting SMS Gateway module, Adobe Photoshop as an interface design, and DBMS MySQL.
